- Williams, Leonard W., instructor, Harvard Medical College.
- Wilson, E. B., professor of zoology, Columbia University.
- Woodruff, L. L., assistant professor of biology, Yale University.

THE UNITED STATES PUBLIC HEALTH SERVICE

THE agitation which has been going on for the past few years for the enlargement of the health activities of the United States government has resulted in the passage of a law, signed by the president on August 14, which enlarges the functions of the Public Health and Marine-Hospital Service and changes the name to the "United States Public Health Service." Under this law the new Public Health Service is given very wide authority to investigate the "diseases of man and conditions influencing the propagation and spread thereof including sanitation," etc. All of the previous laws relating to quarantine, the eradication of certain epidemic diseases and the scientific investigations of the Hygienic Laboratory in bacteriology, pharmacology, chemistry, medical zoology, etc., remain in force so that now the United States has a national public health service with greater scope than that of any of the other leading nations.
